课程介绍

- 了解Mybatis-Plus
- 整合Mybatis-Plus
- 通用CRUD
- Mybatis-Plus的配置
- 条件构造器

1、了解Mybatis-Plus

1.1、Mybatis-Plus介绍

MyBatis-Plus（简称 MP）是一个 MyBatis 的增强工具，在 MyBatis 的基础上只做增强不做改变，为简化开发、提高效率而生。

官网：https://mybatis.plus/ 或 https://mp.baomidou.com/

MyBatis-Plus

为简化开发而生

快速开始 →

润物无声

只做增强不做改变，引入它不会对现有工程产生影响，如丝般顺滑。

效率至上

只需简单配置，即可快速进行 CRUD 操作，从而节省大量时间。

丰富功能

热加载、代码生成、分页、性能分析等功能一应俱全。

> **愿景**
>
> 我们的愿景是成为 MyBatis 最好的搭档，就像 魂斗罗 中的 1P、2P，基友搭配，效率翻倍。

JUST LIKE

TO BE THE BEST PARTNER OF MYBATIS

1.2、代码以及文档

文档地址：https://mybatis.plus/guide/

源码地址：https://github.com/baomidou/mybatis-plus
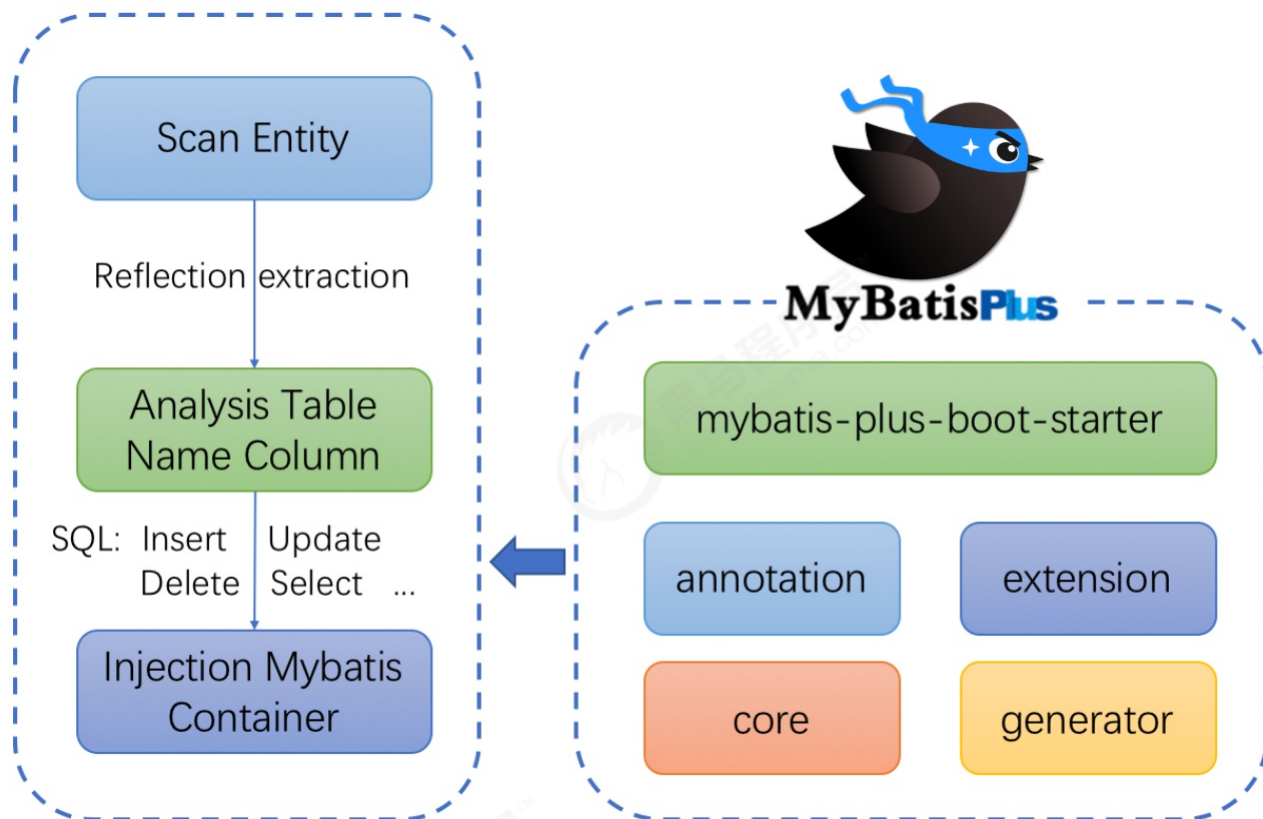

1.3、特性

- **无侵入**：只做增强不做改变，引入它不会对现有工程产生影响，如丝般顺滑
- **损耗小**：启动即会自动注入基本 CURD，性能基本无损耗，直接面向对象操作
- **强大的 CRUD 操作**：内置通用 Mapper、通用 Service，仅仅通过少量配置即可实现单表大部分 CRUD 操作，更有强大的条件构造器，满足各类使用需求
- **支持 Lambda 形式调用**：通过 Lambda 表达式，方便的编写各类查询条件，无需再担心字段写错
- **支持多种数据库**：支持 MySQL、MariaDB、Oracle、DB2、H2、HSQL、SQLite、Postgre、SQLServer2005、SQLServer 等多种数据库
- **支持主键自动生成**：支持多达 4 种主键策略（内含分布式唯一 ID 生成器 - Sequence），可自由配置，完美解决主键问题
- **支持 XML 热加载**：Mapper 对应的 XML 支持热加载，对于简单的 CRUD 操作，甚至可以无 XML 启动
- **支持 ActiveRecord 模式**：支持 ActiveRecord 形式调用，实体类只需继承 Model 类即可进行强大的 CRUD 操作
- **支持自定义全局通用操作**：支持全局通用方法注入（Write once, use anywhere）
- **支持关键词自动转义**：支持数据库关键词（order、key......）自动转义，还可自定义关键词
- **内置代码生成器**：采用代码或者 Maven 插件可快速生成 Mapper 、 Model 、 Service 、 Controller 层代码，支持模板引擎，更有超多自定义配置等您来使用
- **内置分页插件**：基于 MyBatis 物理分页，开发者无需关心具体操作，配置好插件之后，写分页等同于普通 List 查询
- **内置性能分析插件**：可输出 Sql 语句以及其执行时间，建议开发测试时启用该功能，能快速揪出慢查询
- **内置全局拦截插件**：提供全表 delete 、 update 操作智能分析阻断，也可自定义拦截规则，预防误操作
- **内置 Sql 注入剥离器**：支持 Sql 注入剥离，有效预防 Sql 注入攻击

1.4、架构

## 1.5、作者

Mybatis-Plus是由baomidou（苞米豆）组织开发并且开源的，目前该组织大概有30人左右。

码云地址：https://gitee.com/organizations/baomidou

2、快速开始

对于Mybatis整合MP有常常有三种用法，分别是Mybatis+MP、Spring+Mybatis+MP、Spring Boot+Mybatis+MP。

2.1、创建数据库以及表

```sql
-- 创建测试表
CREATE TABLE `tb_user` (
  `id` bigint(20) NOT NULL AUTO_INCREMENT COMMENT '主键ID',
  `user_name` varchar(20) NOT NULL COMMENT '用户名',
  `password` varchar(20) NOT NULL COMMENT '密码',
  `name` varchar(30) DEFAULT NULL COMMENT '姓名',
  `age` int(11) DEFAULT NULL COMMENT '年龄',
  `email` varchar(50) DEFAULT NULL COMMENT '邮箱',
  PRIMARY KEY (`id`)
) ENGINE=InnoDB AUTO_INCREMENT=1 DEFAULT CHARSET=utf8;

-- 插入测试数据
INSERT INTO `tb_user` (`id`, `user_name`, `password`, `name`, `age`, `email`) VALUES ('1', 'zhangsan', '123456', '张三', '18', 'test1@itcast.cn');
INSERT INTO `tb_user` (`id`, `user_name`, `password`, `name`, `age`, `email`) VALUES ('2', 'lisi', '123456', '李四', '20', 'test2@itcast.cn');
INSERT INTO `tb_user` (`id`, `user_name`, `password`, `name`, `age`, `email`) VALUES ('3', 'wangwu', '123456', '王五', '28', 'test3@itcast.cn');
INSERT INTO `tb_user` (`id`, `user_name`, `password`, `name`, `age`, `email`) VALUES ('4', 'zhaoliu', '123456', '赵六', '21', 'test4@itcast.cn');
INSERT INTO `tb_user` (`id`, `user_name`, `password`, `name`, `age`, `email`) VALUES ('5', 'sunqi', '123456', '孙七', '24', 'test5@itcast.cn');
```

2.2、创建工程

New Project

GroupId	cn.itcast.mp	☑ Inherit
ArtifactId	itcast-mybatis-plus	
Version	1.0-SNAPSHOT	☑ Inherit

Previous　Next　Cancel　Help

导入依赖：

```xml
<?xml version="1.0" encoding="UTF-8"?>
<project xmlns="http://maven.apache.org/POM/4.0.0"
         xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
         xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
http://maven.apache.org/xsd/maven-4.0.0.xsd">
    <modelVersion>4.0.0</modelVersion>

    <groupId>cn.itcast.mp</groupId>
    <artifactId>itcast-mybatis-plus</artifactId>
    <version>1.0-SNAPSHOT</version>
    <modules>
        <module>itcast-mybatis-plus-simple</module>
    </modules>
    <packaging>pom</packaging>

    <dependencies>
        <!-- mybatis-plus插件依赖 -->
        <dependency>
            <groupId>com.baomidou</groupId>
            <artifactId>mybatis-plus</artifactId>
            <version>3.1.1</version>
        </dependency>
        <!-- MySql -->
```

```xml
23          <dependency>
24              <groupId>mysql</groupId>
25              <artifactId>mysql-connector-java</artifactId>
26              <version>5.1.47</version>
27          </dependency>
28          <!-- 连接池 -->
29          <dependency>
30              <groupId>com.alibaba</groupId>
31              <artifactId>druid</artifactId>
32              <version>1.0.11</version>
33          </dependency>
34          <!--简化bean代码的工具包-->
35          <dependency>
36              <groupId>org.projectlombok</groupId>
37              <artifactId>lombok</artifactId>
38              <optional>true</optional>
39              <version>1.18.4</version>
40          </dependency>
41          <dependency>
42              <groupId>junit</groupId>
43              <artifactId>junit</artifactId>
44              <version>4.12</version>
45          </dependency>
46          <dependency>
47              <groupId>org.slf4j</groupId>
48              <artifactId>slf4j-log4j12</artifactId>
49              <version>1.6.4</version>
50          </dependency>
51      </dependencies>
52
53      <build>
54          <plugins>
55              <plugin>
56                  <groupId>org.apache.maven.plugins</groupId>
57                  <artifactId>maven-compiler-plugin</artifactId>
58                  <configuration>
59                      <source>1.8</source>
60                      <target>1.8</target>
61                  </configuration>
62              </plugin>
63          </plugins>
64      </build>
65
66  </project>
```

2.3、Mybatis + MP

下面演示，通过纯Mybatis与Mybatis-Plus整合。

2.3.1、创建子Module

```xml
1  <?xml version="1.0" encoding="UTF-8"?>
2  <project xmlns="http://maven.apache.org/POM/4.0.0"
```

```
3           xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
4           xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
   http://maven.apache.org/xsd/maven-4.0.0.xsd">
5       <parent>
6           <artifactId>itcast-mybatis-plus</artifactId>
7           <groupId>cn.itcast.mp</groupId>
8           <version>1.0-SNAPSHOT</version>
9       </parent>
10      <modelVersion>4.0.0</modelVersion>
11      <packaging>jar</packaging>
12
13      <artifactId>itcast-mybatis-plus-simple</artifactId>
14
15  </project>
```

log4j.properties：

```
1   log4j.rootLogger=DEBUG,A1
2
3   log4j.appender.A1=org.apache.log4j.ConsoleAppender
4   log4j.appender.A1.layout=org.apache.log4j.PatternLayout
5   log4j.appender.A1.layout.ConversionPattern=[%t] [%c]-[%p] %m%n
```

2.3.2、Mybatis实现查询User

第一步，编写mybatis-config.xml文件：

```
1   <?xml version="1.0" encoding="UTF-8" ?>
2   <!DOCTYPE configuration
3           PUBLIC "-//mybatis.org//DTD Config 3.0//EN"
4           "http://mybatis.org/dtd/mybatis-3-config.dtd">
5   <configuration>
6       <environments default="development">
7           <environment id="development">
8               <transactionManager type="JDBC"/>
9               <dataSource type="POOLED">
10                  <property name="driver" value="com.mysql.jdbc.Driver"/>
11                  <property name="url" value="jdbc:mysql://127.0.0.1:3306/mp?
   useUnicode=true&amp;characterEncoding=utf8&amp;autoReconnect=true&amp;allowMultiQuerie
   s=true&amp;useSSL=false"/>
12                  <property name="username" value="root"/>
13                  <property name="password" value="root"/>
14              </dataSource>
15          </environment>
16      </environments>
17      <mappers>
18          <mapper resource="UserMapper.xml"/>
19      </mappers>
20  </configuration>
```

第二步，编写User实体对象：（这里使用lombok进行了进化bean操作）

lombok

bean   Getter/Setter   toString
                bean   lombok
                              Getter/Setter   toString
Getter/Setter   toString

主要是基于标注来进行信息的封装和使用：

类型	注解名	作用
类注解	@Data	@Getter/@Setter, @ToString, @EqualAndHashCode等的组合
	@Getter	自动生成Getter方法
	@Setter	自动生成Setter方法
	@ToString	覆盖tostring方法
	@EqualsAndHashCode	覆盖equal和hashCode方法
	@NoArgsConstructor	生成一个无参构造方法
	@AllArgsConstructor	生成一个包含全部参数的构造方法
	@Slf4j	默认使用slf4j的日志对象
属性注解	@NonNull	标识对象是否为空，为空则抛出异常

```java
package cn.itcast.mp.simple.pojo;

import lombok.AllArgsConstructor;
import lombok.Data;
import lombok.NoArgsConstructor;

@Data
@NoArgsConstructor
@AllArgsConstructor
public class User {

    private Long id;
    private String userName;
    private String password;
    private String name;
    private Integer age;
    private String email;
}
```

第三步，编写UserMapper接口：

```java
package cn.itcast.mp.simple.mapper;

import cn.itcast.mp.simple.pojo.User;

import java.util.List;

public interface UserMapper {

    List<User> findAll();

}
```

第四步，编写UserMapper.xml文件：

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!DOCTYPE mapper
        PUBLIC "-//mybatis.org//DTD Mapper 3.0//EN"
        "http://mybatis.org/dtd/mybatis-3-mapper.dtd">
<mapper namespace="cn.itcast.mp.simple.mapper.UserMapper">

    <select id="findAll" resultType="cn.itcast.mp.simple.pojo.User">
      select * from tb_user
    </select>

</mapper>
```

第五步，编写TestMybatis测试用例：

```java
package cn.itcast.mp.simple;

import cn.itcast.mp.simple.mapper.UserMapper;
import cn.itcast.mp.simple.pojo.User;
import org.apache.ibatis.io.Resources;
import org.apache.ibatis.session.SqlSession;
import org.apache.ibatis.session.SqlSessionFactory;
import org.apache.ibatis.session.SqlSessionFactoryBuilder;
import org.junit.Test;

import java.io.InputStream;
import java.util.List;

public class TestMybatis {

    @Test
    public void testUserList() throws Exception{
        String resource = "mybatis-config.xml";
        InputStream inputStream = Resources.getResourceAsStream(resource);
        SqlSessionFactory sqlSessionFactory = new
SqlSessionFactoryBuilder().build(inputStream);
        SqlSession sqlSession = sqlSessionFactory.openSession();

        UserMapper userMapper = sqlSession.getMapper(UserMapper.class);
        List<User> list = userMapper.findAll();
        for (User user : list) {
            System.out.println(user);
        }

    }

}
```

测试结果：

```
[main] [cn.itcast.mp.simple.mapper.UserMapper.findAll]-[DEBUG] ==> Parameters:
[main] [cn.itcast.mp.simple.mapper.UserMapper.findAll]-[DEBUG] <==      Total: 5
User(id=1, userName=null, password=123456, name=张三, age=18, email=test1@itcast.cn)
User(id=2, userName=null, password=123456, name=李四, age=20, email=test2@itcast.cn)
User(id=3, userName=null, password=123456, name=王五, age=28, email=test3@itcast.cn)
User(id=4, userName=null, password=123456, name=赵六, age=21, email=test4@itcast.cn)
User(id=5, userName=null, password=123456, name=孙七, age=24, email=test5@itcast.cn)
```

2.3.3、Mybatis+MP实现查询User

第一步，将UserMapper继承BaseMapper，将拥有了BaseMapper中的所有方法：

```java
package cn.itcast.mp.simple.mapper;

import cn.itcast.mp.simple.pojo.User;
import com.baomidou.mybatisplus.core.mapper.BaseMapper;

import java.util.List;

public interface UserMapper extends BaseMapper<User> {

    List<User> findAll();

}
```

第二步，使用MP中的MybatisSqlSessionFactoryBuilder进程构建：

```java
package cn.itcast.mp.simple;

import cn.itcast.mp.simple.mapper.UserMapper;
import cn.itcast.mp.simple.pojo.User;
import com.baomidou.mybatisplus.core.MybatisSqlSessionFactoryBuilder;
import org.apache.ibatis.io.Resources;

import org.apache.ibatis.session.SqlSession;
import org.apache.ibatis.session.SqlSessionFactory;
import org.apache.ibatis.session.SqlSessionFactoryBuilder;
import org.junit.Test;

import java.io.InputStream;
import java.util.List;

public class TestMybatisPlus {

    @Test
    public void testUserList() throws Exception{
        String resource = "mybatis-config.xml";
        InputStream inputStream = Resources.getResourceAsStream(resource);
        //这里使用的是MP中的MybatisSqlSessionFactoryBuilder
        SqlSessionFactory sqlSessionFactory = new
MybatisSqlSessionFactoryBuilder().build(inputStream);
        SqlSession sqlSession = sqlSessionFactory.openSession();

        UserMapper userMapper = sqlSession.getMapper(UserMapper.class);

        // 可以调用BaseMapper中定义的方法
        List<User> list = userMapper.selectList(null);
        for (User user : list) {
            System.out.println(user);
        }

    }
```

```
36  }
37
```

运行报错：

```
ltParameterMap
tting parameters
assword,name,age,email  FROM user
tions.jdbc4.MySQLSyntaxErrorException: Table 'mp.user' doesn't exist

ions.ExceptionFactory.wrapException(ExceptionFactory.java:30)
n.defaults.DefaultSqlSession.selectList(DefaultSqlSession.java:150)
n.defaults.DefaultSqlSession.selectList(DefaultSqlSession.java:141)
.core.override.MybatisMapperMethod.executeForMany(MybatisMapperMethod.java:168)
.core.override.MybatisMapperMethod.execute(MybatisMapperMethod.java:82)
core.override.MybatisMapperProxy.invoke(MybatisMapperProxy.java:61) <1 internal call
```

解决：在User对象中添加@TableName，指定数据库表名

```java
@Data
@NoArgsConstructor
@AllArgsConstructor
@TableName("tb_user")
public class User {

    private Long id;
    private String userName;
    private String password;
    private String name;
    private Integer age;
    private String email;

}
```

测试：

```
1  [main] [cn.itcast.mp.simple.mapper.UserMapper.selectList]-[DEBUG] ==>  Preparing:
   SELECT id,user_name,password,name,age,email FROM tb_user
2  [main] [cn.itcast.mp.simple.mapper.UserMapper.selectList]-[DEBUG] ==> Parameters:
3  [main] [cn.itcast.mp.simple.mapper.UserMapper.selectList]-[DEBUG] <==      Total: 5
4  User(id=1, userName=zhangsan, password=123456, name=张三, age=18, email=test1@itcast.cn)
5  User(id=2, userName=lisi, password=123456, name=李四, age=20, email=test2@itcast.cn)
6  User(id=3, userName=wangwu, password=123456, name=王五, age=28, email=test3@itcast.cn)
7  User(id=4, userName=zhaoliu, password=123456, name=赵六, age=21, email=test4@itcast.cn)
8  User(id=5, userName=sunqi, password=123456, name=孙七, age=24, email=test5@itcast.cn)
```

简单说明：

- 由于使用了MybatisSqlSessionFactoryBuilder进行了构建，继承的BaseMapper中的方法就载入到了SqlSession中，所以就可以直接使用相关的方法；

- 如图：
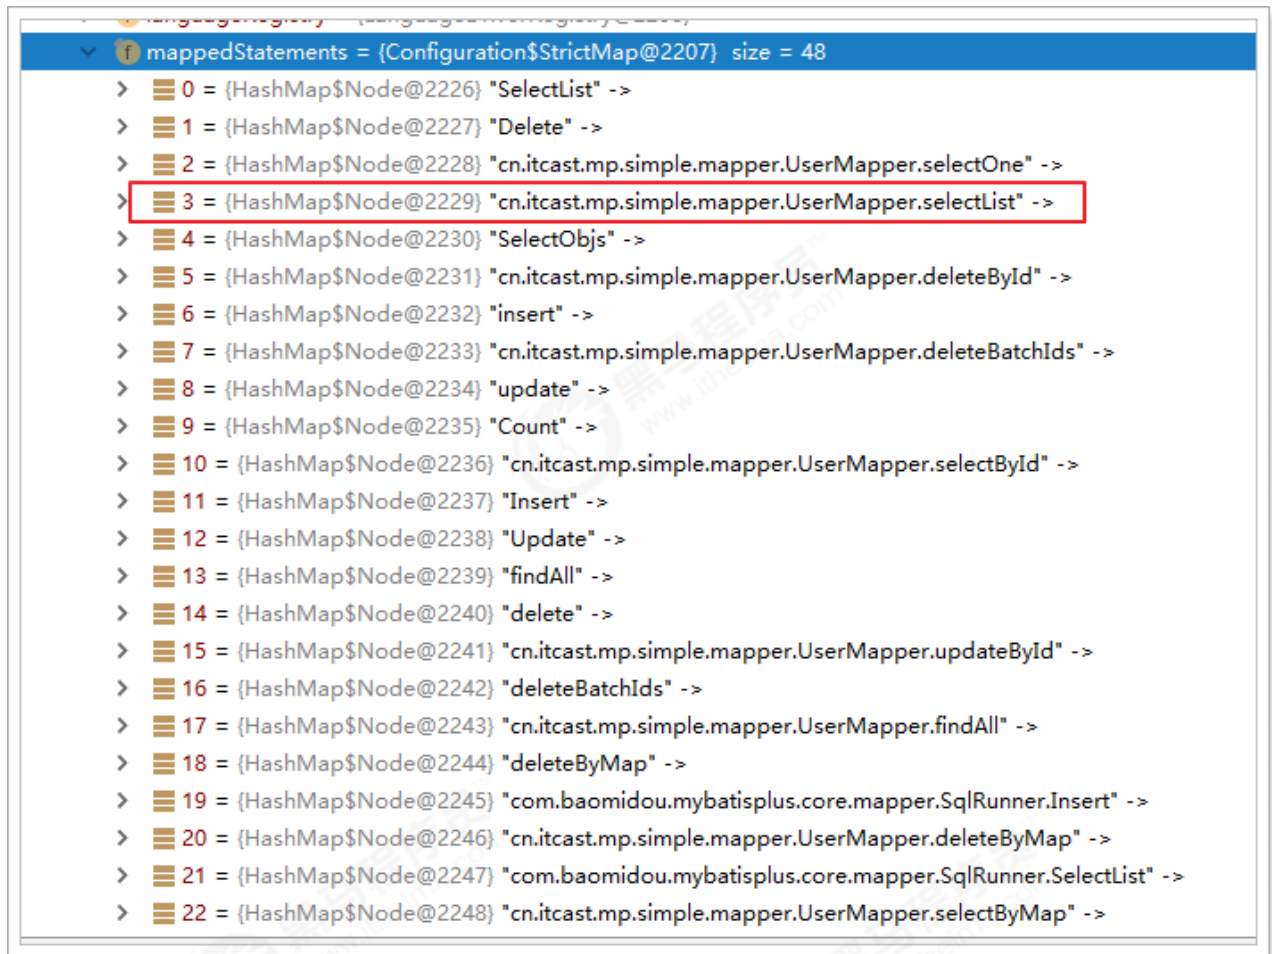

2.4、Spring + Mybatis + MP

引入了Spring框架，数据源、构建等工作就交给了Spring管理。

2.4.1、创建子Module

```xml
<?xml version="1.0" encoding="UTF-8"?>
<project xmlns="http://maven.apache.org/POM/4.0.0"
         xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
         xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
http://maven.apache.org/xsd/maven-4.0.0.xsd">
    <parent>
        <artifactId>itcast-mybatis-plus</artifactId>
        <groupId>cn.itcast.mp</groupId>
        <version>1.0-SNAPSHOT</version>
    </parent>
    <modelVersion>4.0.0</modelVersion>

    <artifactId>itcast-mybatis-plus-spring</artifactId>

    <properties>
        <spring.version>5.1.6.RELEASE</spring.version>
    </properties>
```

```
18        <dependencies>
19            <dependency>
20                <groupId>org.springframework</groupId>
21                <artifactId>spring-webmvc</artifactId>
22                <version>${spring.version}</version>
23            </dependency>
24            <dependency>
25                <groupId>org.springframework</groupId>
26                <artifactId>spring-jdbc</artifactId>
27                <version>${spring.version}</version>
28            </dependency>
29            <dependency>
30                <groupId>org.springframework</groupId>
31                <artifactId>spring-test</artifactId>
32                <version>${spring.version}</version>
33            </dependency>
34        </dependencies>
35
36
37    </project>
```

2.4.2、实现查询User

第一步，编写jdbc.properties

```
1    jdbc.driver=com.mysql.jdbc.Driver
2    jdbc.url=jdbc:mysql://127.0.0.1:3306/mp?
     useUnicode=true&characterEncoding=utf8&autoReconnect=true&allowMultiQueries=true&useSSL
     =false
3    jdbc.username=root
4    jdbc.password=root
```

第二步，编写applicationContext.xml

```
1    <?xml version="1.0" encoding="UTF-8"?>
2    <beans xmlns="http://www.springframework.org/schema/beans"
3           xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
4           xmlns:context="http://www.springframework.org/schema/context"
5           xsi:schemaLocation="http://www.springframework.org/schema/beans
6            http://www.springframework.org/schema/beans/spring-beans.xsd
7            http://www.springframework.org/schema/context
8            http://www.springframework.org/schema/context/spring-context.xsd">
9
10       <context:property-placeholder location="classpath:*.properties"/>
11
12       <!-- 定义数据源 -->
13       <bean id="dataSource" class="com.alibaba.druid.pool.DruidDataSource"
14           destroy-method="close">
15           <property name="url" value="${jdbc.url}"/>
16           <property name="username" value="${jdbc.username}"/>
17           <property name="password" value="${jdbc.password}"/>
18           <property name="driverClassName" value="${jdbc.driver}"/>
```

```
19          <property name="maxActive" value="10"/>
20          <property name="minIdle" value="5"/>
21      </bean>
22
23      <!--这里使用MP提供的sqlSessionFactory，完成了Spring与MP的整合-->
24      <bean id="sqlSessionFactory"
    class="com.baomidou.mybatisplus.extension.spring.MybatisSqlSessionFactoryBean">
25          <property name="dataSource" ref="dataSource"/>
26      </bean>
27
28      <!--扫描mapper接口，使用的依然是Mybatis原生的扫描器-->
29      <bean class="org.mybatis.spring.mapper.MapperScannerConfigurer">
30          <property name="basePackage" value="cn.itcast.mp.simple.mapper"/>
31      </bean>
32
33  </beans>
34
```

第三步，编写User对象以及UserMapper接口：

```
1   package cn.itcast.mp.simple.pojo;
2
3   import com.baomidou.mybatisplus.annotation.TableName;
4   import lombok.AllArgsConstructor;
5   import lombok.Data;
6   import lombok.NoArgsConstructor;
7
8   @Data
9   @NoArgsConstructor
10  @AllArgsConstructor
11  @TableName("tb_user")
12  public class User {
13
14      private Long id;
15      private String userName;
16      private String password;
17      private String name;
18      private Integer age;
19      private String email;
20  }
21
```

```
1   package cn.itcast.mp.simple.mapper;
2
3   import cn.itcast.mp.simple.pojo.User;
4   import com.baomidou.mybatisplus.core.mapper.BaseMapper;
5
6   public interface UserMapper extends BaseMapper<User> {
7
8   }
```

第四步，编写测试用例：

```java
1  package cn.itcast.mp.simple;
2
3  import cn.itcast.mp.simple.mapper.UserMapper;
4  import cn.itcast.mp.simple.pojo.User;
5  import org.junit.Test;
6  import org.junit.runner.RunWith;
7  import org.springframework.beans.factory.annotation.Autowired;
8  import org.springframework.test.context.ContextConfiguration;
9  import org.springframework.test.context.junit4.SpringJUnit4ClassRunner;
10
11 import java.util.List;
12
13 @RunWith(SpringJUnit4ClassRunner.class)
14 @ContextConfiguration(locations = "classpath:applicationContext.xml")
15 public class TestSpringMP {
16
17     @Autowired
18     private UserMapper userMapper;
19
20     @Test
21     public void testSelectList(){
22         List<User> users = this.userMapper.selectList(null);
23         for (User user : users) {
24             System.out.println(user);
25         }
26     }
27
28 }
29
```

测试：

```
1  [main] [cn.itcast.mp.simple.mapper.UserMapper.selectList]-[DEBUG] ==>  Preparing:
   SELECT id,user_name,password,name,age,email FROM tb_user
2  [main] [cn.itcast.mp.simple.mapper.UserMapper.selectList]-[DEBUG] ==> Parameters:
3  [main] [cn.itcast.mp.simple.mapper.UserMapper.selectList]-[DEBUG] <==      Total: 5
4  [main] [org.mybatis.spring.SqlSessionUtils]-[DEBUG] Closing non transactional
   SqlSession [org.apache.ibatis.session.defaults.DefaultSqlSession@74287ea3]
5  User(id=1, userName=zhangsan, password=123456, name=张三, age=18,
   email=test1@itcast.cn)
6  User(id=2, userName=lisi, password=123456, name=李四, age=20, email=test2@itcast.cn)
7  User(id=3, userName=wangwu, password=123456, name=王五, age=28, email=test3@itcast.cn)
8  User(id=4, userName=zhaoliu, password=123456, name=赵六, age=21, email=test4@itcast.cn)
9  User(id=5, userName=sunqi, password=123456, name=孙七, age=24, email=test5@itcast.cn)
10
```

2.5、SpringBoot + Mybatis + MP

使用SpringBoot将进一步的简化MP的整合，需要注意的是，由于使用SpringBoot需要继承parent，所以需要重新创建工程，并不是创建子Module。

2.5.1、创建工程

2.5.2、导入依赖

```xml
<?xml version="1.0" encoding="UTF-8"?>
<project xmlns="http://maven.apache.org/POM/4.0.0"
         xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
         xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
http://maven.apache.org/xsd/maven-4.0.0.xsd">
    <modelVersion>4.0.0</modelVersion>

    <parent>
        <groupId>org.springframework.boot</groupId>
        <artifactId>spring-boot-starter-parent</artifactId>
        <version>2.1.4.RELEASE</version>
    </parent>

    <groupId>cn.itcast.mp</groupId>
    <artifactId>itcast-mp-springboot</artifactId>
    <version>1.0-SNAPSHOT</version>

    <dependencies>
        <dependency>
            <groupId>org.springframework.boot</groupId>
            <artifactId>spring-boot-starter</artifactId>
            <exclusions>
                <exclusion>
```

```xml
23                    <groupId>org.springframework.boot</groupId>
24                    <artifactId>spring-boot-starter-logging</artifactId>
25                </exclusion>
26            </exclusions>
27        </dependency>
28        <dependency>
29            <groupId>org.springframework.boot</groupId>
30            <artifactId>spring-boot-starter-test</artifactId>
31            <scope>test</scope>
32        </dependency>
33
34        <!--简化代码的工具包-->
35        <dependency>
36            <groupId>org.projectlombok</groupId>
37            <artifactId>lombok</artifactId>
38            <optional>true</optional>
39        </dependency>
40        <!--mybatis-plus的springboot支持-->
41        <dependency>
42            <groupId>com.baomidou</groupId>
43            <artifactId>mybatis-plus-boot-starter</artifactId>
44            <version>3.1.1</version>
45        </dependency>
46        <!--mysql驱动-->
47        <dependency>
48            <groupId>mysql</groupId>
49            <artifactId>mysql-connector-java</artifactId>
50            <version>5.1.47</version>
51        </dependency>
52        <dependency>
53            <groupId>org.slf4j</groupId>
54            <artifactId>slf4j-log4j12</artifactId>
55        </dependency>
56
57    </dependencies>
58
59    <build>
60        <plugins>
61            <plugin>
62                <groupId>org.springframework.boot</groupId>
63                <artifactId>spring-boot-maven-plugin</artifactId>
64            </plugin>
65        </plugins>
66    </build>
67
68 </project>
```

log4j.properties：

```
1  log4j.rootLogger=DEBUG,A1
2
3  log4j.appender.A1=org.apache.log4j.ConsoleAppender
4  log4j.appender.A1.layout=org.apache.log4j.PatternLayout
5  log4j.appender.A1.layout.ConversionPattern=[%t] [%c]-[%p] %m%n
```

2.5.3、编写application.properties

```
1  spring.application.name = itcast-mp-springboot
2
3  spring.datasource.driver-class-name=com.mysql.jdbc.Driver
4  spring.datasource.url=jdbc:mysql://127.0.0.1:3306/mp?
   useUnicode=true&characterEncoding=utf8&autoReconnect=true&allowMultiQueries=true&useSSL
   =false
5  spring.datasource.username=root
6  spring.datasource.password=root
```

2.5.4、编写pojo

```
1  package cn.itcast.mp.pojo;
2
3  import com.baomidou.mybatisplus.annotation.TableName;
4  import lombok.AllArgsConstructor;
5  import lombok.Data;
6  import lombok.NoArgsConstructor;
7
8  @Data
9  @NoArgsConstructor
10 @AllArgsConstructor
11 @TableName("tb_user")
12 public class User {
13
14     private Long id;
15     private String userName;
16     private String password;
17     private String name;
18     private Integer age;
19     private String email;
20 }
```

2.5.5、编写mapper

```
1  package cn.itcast.mp.mapper;
2
3  import cn.itcast.mp.pojo.User;
4  import com.baomidou.mybatisplus.core.mapper.BaseMapper;
5
6  public interface UserMapper extends BaseMapper<User> {
7  }
8
```

2.5.6、编写启动类

```
1   package cn.itcast.mp;
2
3   import org.mybatis.spring.annotation.MapperScan;
4   import org.springframework.boot.SpringApplication;
5   import org.springframework.boot.WebApplicationType;
6   import org.springframework.boot.autoconfigure.SpringBootApplication;
7   import org.springframework.boot.builder.SpringApplicationBuilder;
8
9   @MapperScan("cn.itcast.mp.mapper") //设置mapper接口的扫描包
10  @SpringBootApplication
11  public class MyApplication {
12
13      public static void main(String[] args) {
14          SpringApplication.run(MyApplication.class, args);
15      }
16
17  }
```
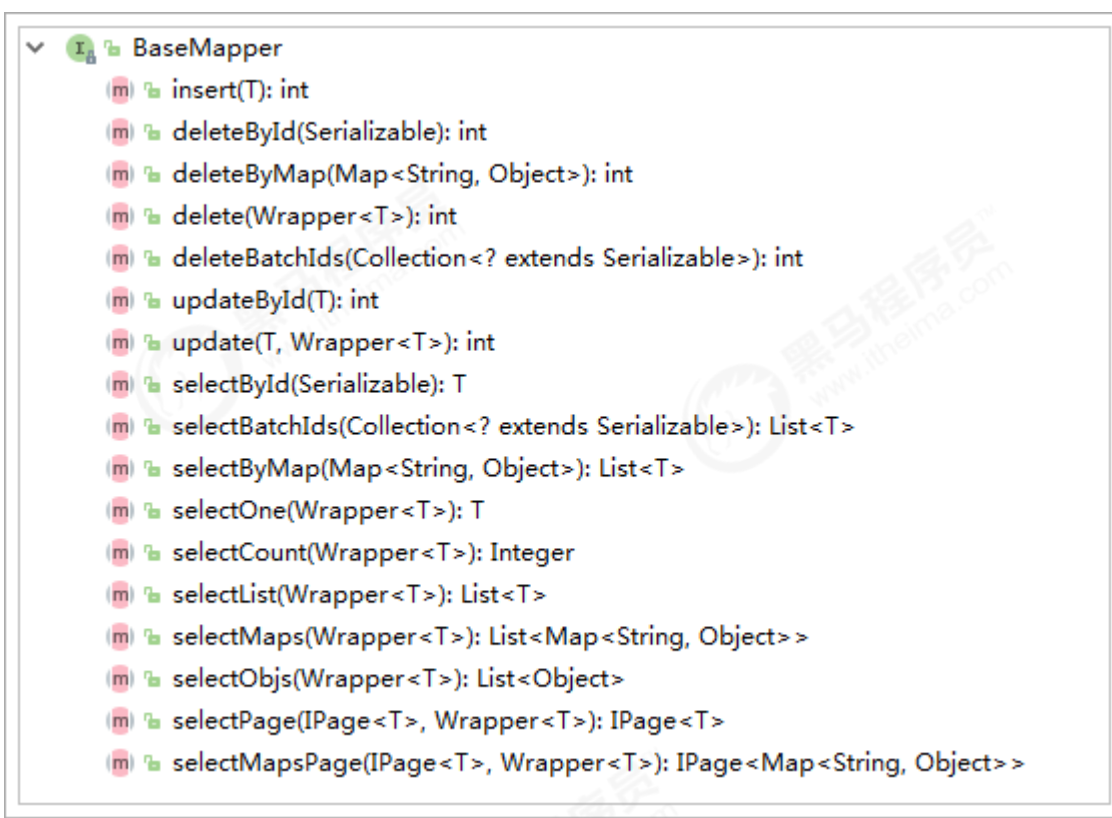

2.5.7、编写测试用例

```
1   package cn.itcast.mp;
2
3   import cn.itcast.mp.mapper.UserMapper;
4   import cn.itcast.mp.pojo.User;
5   import org.junit.Test;
6   import org.junit.runner.RunWith;
7   import org.springframework.beans.factory.annotation.Autowired;
8   import org.springframework.boot.test.context.SpringBootTest;
9   import org.springframework.test.context.junit4.SpringRunner;
10
11  import java.util.List;
12
13  @RunWith(SpringRunner.class)
14  @SpringBootTest
15  public class UserMapperTest {
16
17      @Autowired
18      private UserMapper userMapper;
19
20      @Test
21      public void testSelect() {
22          List<User> userList = userMapper.selectList(null);
23          for (User user : userList) {
24              System.out.println(user);
25          }
26      }
27
28  }
```

测试：

```
1  [main] [cn.itcast.mp.mapper.UserMapper.selectList]-[DEBUG] ==> Preparing: SELECT
   id,user_name,password,name,age,email FROM tb_user
2  [main] [cn.itcast.mp.mapper.UserMapper.selectList]-[DEBUG] ==> Parameters:
3  [main] [cn.itcast.mp.mapper.UserMapper.selectList]-[DEBUG] <==      Total: 5
4  [main] [org.mybatis.spring.SqlSessionUtils]-[DEBUG] Closing non transactional
   SqlSession [org.apache.ibatis.session.defaults.DefaultSqlSession@14faa38c]
5  User(id=1, userName=zhangsan, password=123456, name=张三, age=18, email=test1@itcast.cn)
6  User(id=2, userName=lisi, password=123456, name=李四, age=20, email=test2@itcast.cn)
7  User(id=3, userName=wangwu, password=123456, name=王五, age=28, email=test3@itcast.cn)
8  User(id=4, userName=zhaoliu, password=123456, name=赵六, age=21, email=test4@itcast.cn)
9  User(id=5, userName=sunqi, password=123456, name=孙七, age=24, email=test5@itcast.cn)
```

3、通用CRUD

通过前面的学习，我们了解到通过继承BaseMapper就可以获取到各种各样的单表操作，接下来我们将详细讲解这些操作。

3.1、插入操作

3.1.1、方法定义

```
1    /**
2     * 插入一条记录
3     *
4     * @param entity 实体对象
5     */
6    int insert(T entity);
```

3.1.2、测试用例

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

import java.util.List;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testInsert(){
        User user = new User();
        user.setAge(20);
        user.setEmail("test@itcast.cn");
        user.setName("曹操");
        user.setUserName("caocao");
        user.setPassword("123456");

        int result = this.userMapper.insert(user); //返回的result是受影响的行数，并不是自增
后的id
        System.out.println("result = " + result);

        System.out.println(user.getId()); //自增后的id会回填到对象中
    }

}
```

3.1.3、测试

```
[main] [cn.itcast.mp.mapper.UserMapper.insert]-[DEBUG] ==>  Preparing: INSERT INTO
tb_user ( id, user_name, password, name, age, email ) VALUES ( ?, ?, ?, ?, ?, ? )
[main] [cn.itcast.mp.mapper.UserMapper.insert]-[DEBUG] ==> Parameters:
1122045867793072130(Long), caocao(String), 123456(String), 曹操(String), 20(Integer),
test@itcast.cn(String)
[main] [cn.itcast.mp.mapper.UserMapper.insert]-[DEBUG] <==    Updates: 1
[main] [org.mybatis.spring.SqlSessionUtils]-[DEBUG] Closing non transactional
SqlSession [org.apache.ibatis.session.defaults.DefaultSqlSession@411291e5]
result = 1
1122045867793072130
```

可以看到，数据已经写入到了数据库，但是，id的值不正确，我们期望的是数据库自增长，实际是MP生成了id的值写入到了数据库。

如何设置id的生成策略呢？

MP支持的id策略：

```java
package com.baomidou.mybatisplus.annotation;

import lombok.Getter;

/**
 * 生成ID类型枚举类
 *
 * @author hubin
 * @since 2015-11-10
 */
@Getter
public enum IdType {
    /**
     * 数据库ID自增
     */
    AUTO(0),
    /**
     * 该类型为未设置主键类型
     */
    NONE(1),
    /**
     * 用户输入ID
     * <p>该类型可以通过自己注册自动填充插件进行填充</p>
     */
    INPUT(2),

    /* 以下3种类型、只有当插入对象ID 为空，才自动填充。  */
    /**
     * 全局唯一ID (idWorker)
     */
    ID_WORKER(3),
    /**
     * 全局唯一ID (UUID)
     */
    UUID(4),
```

```
36      /**
37       * 字符串全局唯一ID（idWorker 的字符串表示）
38       */
39      ID_WORKER_STR(5);
40
41      private final int key;
42
43      IdType(int key) {
44          this.key = key;
45      }
46  }
47
```

修改User对象：

```
1   package cn.itcast.mp.pojo;
2
3   import com.baomidou.mybatisplus.annotation.IdType;
4   import com.baomidou.mybatisplus.annotation.TableId;
5   import com.baomidou.mybatisplus.annotation.TableName;
6   import lombok.AllArgsConstructor;
7   import lombok.Data;
8   import lombok.NoArgsConstructor;
9
10  @Data
11  @NoArgsConstructor
12  @AllArgsConstructor
13  @TableName("tb_user")
14  public class User {
15
16      @TableId(type = IdType.AUTO) //指定id类型为自增长
17      private Long id;
18      private String userName;
19      private String password;
20      private String name;
21      private Integer age;
22      private String email;
23  }
```

数据插入成功：

id	user_name	password	name	age	email
1	zhangsan	123456	张三	18	test1@itcast.cn
2	lisi	123456	李四	20	test2@itcast.cn
3	wangwu	123456	王五	28	test3@itcast.cn
4	zhaoliu	123456	赵六	21	test4@itcast.cn
5	sunqi	123456	孙七	24	test5@itcast.cn
6	caocao	123456	曹操	20	test@itcast.cn

3.1.4、@TableField

在MP中通过@TableField注解可以指定字段的一些属性，常常解决的问题有2个：

1、对象中的属性名和字段名不一致的问题（非驼峰）

2、对象中的属性字段在表中不存在的问题

使用：

```java
@Data
@NoArgsConstructor
@AllArgsConstructor
@TableName("tb_user")
public class User {

    @TableId(type = IdType.AUTO)
    private Long id;
    private String userName;
    private String password;
    private String name;
    private Integer age;
    @TableField(value = "email")  //解决字段名不一致
    private String mail;

    @TableField(exist = false)
    private String address;  //该字段在数据库表中不存在

}
```

其他用法，如大字段不加入查询字段：

```java
@TableName("tb_user")
public class User {

    @TableId(type = IdType.AUTO)
    private Long id;
    private String userName;
    @TableField(select = false)
    private String password;
    private String name;
    private Integer age;
    @TableField(value = "email")  //解决字段名不一致
    private String mail;
```

效果：

```
[main] [org.mybatis.spring.SqlSessionUtils]-[DEBUG] Closing non transactional SqlSessio
User(id=1, userName=zhangsan, password=null, name=张三, age=18, mail=test1@itcast.cn, ac
User(id=2, userName=lisi, password=null, name=李四, age=20, mail=test2@itcast.cn, addres
User(id=3, userName=wangwu, password=null, name=王五, age=28, mail=test3@itcast.cn, addr
User(id=4, userName=zhaoliu, password=null, name=赵六, age=21, mail=test4@itcast.cn, add
User(id=5, userName=sunqi, password=null, name=孙七, age=24, mail=test5@itcast.cn, addre
User(id=6, userName=caocao, password=null, name=曹操, age=20, mail=test@itcast.cn, addre
```

3.2、更新操作

在MP中，更新操作有2种，一种是根据id更新，另一种是根据条件更新。

3.2.1、根据id更新

方法定义：

```
1      /**
2       * 根据 ID 修改
3       *
4       * @param entity 实体对象
5       */
6      int updateById(@Param(Constants.ENTITY) T entity);
```

测试：

```
1  @RunWith(SpringRunner.class)
2  @SpringBootTest
3  public class UserMapperTest {
4
5      @Autowired
6      private UserMapper userMapper;
7
8      @Test
9      public void testUpdateById() {
10         User user = new User();
11         user.setId(6L); //主键
12         user.setAge(21); //更新的字段
13
14         //根据id更新，更新不为null的字段
15         this.userMapper.updateById(user);
16     }
17
18 }
```

结果：

```
1  [main] [cn.itcast.mp.mapper.UserMapper.updateById]-[DEBUG] ==>  Preparing: UPDATE
   tb_user SET age=? WHERE id=?
2  [main] [cn.itcast.mp.mapper.UserMapper.updateById]-[DEBUG] ==> Parameters: 21(Integer),
   6(Long)
3  [main] [cn.itcast.mp.mapper.UserMapper.updateById]-[DEBUG] <==    Updates: 1
```

id	user_name	password	name	age	email
1	zhangsan	123456	张三	18	test1@itcast.cn
2	lisi	123456	李四	20	test2@itcast.cn
3	wangwu	123456	王五	28	test3@itcast.cn
4	zhaoliu	123456	赵六	21	test4@itcast.cn
5	sunqi	123456	孙七	24	test5@itcast.cn
6	caocao	123456	曹操	21	test@itcast.cn

3.2.2、根据条件更新

方法定义：

```
/**
 * 根据 whereEntity 条件，更新记录
 *
 * @param entity        实体对象（set 条件值,可以为 null）
 * @param updateWrapper 实体对象封装操作类（可以为 null,里面的 entity 用于生成 where 语句）
 */
int update(@Param(Constants.ENTITY) T entity, @Param(Constants.WRAPPER) Wrapper<T> updateWrapper);
```

测试用例：

```
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
import com.baomidou.mybatisplus.core.conditions.Wrapper;
import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
import com.baomidou.mybatisplus.core.conditions.update.UpdateWrapper;
import net.minidev.json.writer.UpdaterMapper;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

import java.util.List;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testUpdate() {
```

```
26              User user = new User();
27              user.setAge(22); //更新的字段
28
29              //更新的条件
30              QueryWrapper<User> wrapper = new QueryWrapper<>();
31              wrapper.eq("id", 6);
32
33              //执行更新操作
34              int result = this.userMapper.update(user, wrapper);
35              System.out.println("result = " + result);
36          }
37
38      }
```

或者，通过UpdateWrapper进行更新：

```
1       @Test
2       public void testUpdate() {
3           //更新的条件以及字段
4           UpdateWrapper<User> wrapper = new UpdateWrapper<>();
5           wrapper.eq("id", 6).set("age", 23);
6
7           //执行更新操作
8           int result = this.userMapper.update(null, wrapper);
9           System.out.println("result = " + result);
10      }
```

测试结果：

```
1   [main] [cn.itcast.mp.mapper.UserMapper.update]-[DEBUG] ==>  Preparing: UPDATE tb_user
    SET age=? WHERE id = ?
2   [main] [cn.itcast.mp.mapper.UserMapper.update]-[DEBUG] ==> Parameters: 23(Integer),
    6(Integer)
3   [main] [cn.itcast.mp.mapper.UserMapper.update]-[DEBUG] <==    Updates: 1
```

均可达到更新的效果。

关于wrapper更多的用法后面会详细讲解。

3.3、删除操作

3.3.1、deleteById

方法定义：

```
1   /**
2    * 根据 ID 删除
3    *
4    * @param id 主键ID
5    */
6   int deleteById(Serializable id);
```

测试用例：

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testDeleteById() {
        //执行删除操作
        int result = this.userMapper.deleteById(6L);
        System.out.println("result = " + result);
    }

}
```

结果：

```
[main] [cn.itcast.mp.mapper.UserMapper.deleteById]-[DEBUG] ==>  Preparing: DELETE FROM
tb_user WHERE id=?
[main] [cn.itcast.mp.mapper.UserMapper.deleteById]-[DEBUG] ==> Parameters: 6(Long)
[main] [cn.itcast.mp.mapper.UserMapper.deleteById]-[DEBUG] <==    Updates: 1
```

id	user_name	password	name	age	email
1	zhangsan	123456	张三	18	test1@itcast.cn
2	lisi	123456	李四	20	test2@itcast.cn
3	wangwu	123456	王五	28	test3@itcast.cn
4	zhaoliu	123456	赵六	21	test4@itcast.cn
5	sunqi	123456	孙七	24	test5@itcast.cn

数据被删除。

3.3.2、deleteByMap

方法定义：

```
1      /**
2       * 根据 columnMap 条件，删除记录
3       *
4       * @param columnMap 表字段 map 对象
5       */
6      int deleteByMap(@Param(Constants.COLUMN_MAP) Map<String, Object> columnMap);
```

测试用例：

```
1   package cn.itcast.mp;
2
3   import cn.itcast.mp.mapper.UserMapper;
4   import org.junit.Test;
5   import org.junit.runner.RunWith;
6   import org.springframework.beans.factory.annotation.Autowired;
7   import org.springframework.boot.test.context.SpringBootTest;
8   import org.springframework.test.context.junit4.SpringRunner;
9
10  import java.util.HashMap;
11  import java.util.Map;
12
13  @RunWith(SpringRunner.class)
14  @SpringBootTest
15  public class UserMapperTest {
16
17      @Autowired
18      private UserMapper userMapper;
19
20      @Test
21      public void testDeleteByMap() {
22          Map<String, Object> columnMap = new HashMap<>();
23          columnMap.put("age",20);
24          columnMap.put("name","张三");
25
26          //将columnMap中的元素设置为删除的条件，多个之间为and关系
27          int result = this.userMapper.deleteByMap(columnMap);
28          System.out.println("result = " + result);
29      }
30
31  }
```

结果：

```
1   [main] [cn.itcast.mp.mapper.UserMapper.deleteByMap]-[DEBUG] ==>  Preparing: DELETE FROM
    tb_user WHERE name = ? AND age = ?
2   [main] [cn.itcast.mp.mapper.UserMapper.deleteByMap]-[DEBUG] ==> Parameters: 张三
    (String), 20(Integer)
3   [main] [cn.itcast.mp.mapper.UserMapper.deleteByMap]-[DEBUG] <==    Updates: 0
```

3.3.3、delete

方法定义：

```
/**
 * 根据 entity 条件，删除记录
 *
 * @param wrapper 实体对象封装操作类（可以为 null）
 */
int delete(@Param(Constants.WRAPPER) Wrapper<T> wrapper);
```

测试用例：

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

import java.util.HashMap;
import java.util.Map;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testDeleteByMap() {
        User user = new User();
        user.setAge(20);
        user.setName("张三");

        //将实体对象进行包装，包装为操作条件
        QueryWrapper<User> wrapper = new QueryWrapper<>(user);

        int result = this.userMapper.delete(wrapper);
        System.out.println("result = " + result);
    }

}
```

结果：

```
1  [main] [cn.itcast.mp.mapper.UserMapper.delete]-[DEBUG] ==>  Preparing: DELETE FROM
   tb_user WHERE name=? AND age=?
2  [main] [cn.itcast.mp.mapper.UserMapper.delete]-[DEBUG] ==> Parameters: 张三(String),
   20(Integer)
3  [main] [cn.itcast.mp.mapper.UserMapper.delete]-[DEBUG] <==    Updates: 0
```

3.3.4、deleteBatchIds

方法定义：

```
1      /**
2       * 删除（根据ID 批量删除）
3       *
4       * @param idList 主键ID列表(不能为 null 以及 empty)
5       */
6      int deleteBatchIds(@Param(Constants.COLLECTION) Collection<? extends Serializable>
   idList);
```

测试用例：

```
1  package cn.itcast.mp;
2
3  import cn.itcast.mp.mapper.UserMapper;
4  import org.junit.Test;
5  import org.junit.runner.RunWith;
6  import org.springframework.beans.factory.annotation.Autowired;
7  import org.springframework.boot.test.context.SpringBootTest;
8  import org.springframework.test.context.junit4.SpringRunner;
9
10 import java.util.Arrays;
11
12 @RunWith(SpringRunner.class)
13 @SpringBootTest
14 public class UserMapperTest {
15
16     @Autowired
17     private UserMapper userMapper;
18
19     @Test
20     public void testDeleteByMap() {
21         //根据id集合批量删除
22         int result = this.userMapper.deleteBatchIds(Arrays.asList(1L,10L,20L));
23         System.out.println("result = " + result);
24     }
25
26 }
```

结果：

```
1   [main] [cn.itcast.mp.mapper.UserMapper.deleteBatchIds]-[DEBUG] ==>  Preparing: DELETE
    FROM tb_user WHERE id IN ( ? , ? , ? )
2   [main] [cn.itcast.mp.mapper.UserMapper.deleteBatchIds]-[DEBUG] ==> Parameters: 1(Long),
    10(Long), 20(Long)
3   [main] [cn.itcast.mp.mapper.UserMapper.deleteBatchIds]-[DEBUG] <==    Updates: 1
```

3.4、查询操作

MP提供了多种查询操作，包括根据id查询、批量查询、查询单条数据、查询列表、分页查询等操作。

3.4.1、selectById

方法定义：

```
1       /**
2        * 根据 ID 查询
3        *
4        * @param id 主键ID
5        */
6      T selectById(Serializable id);
```

测试用例：

```
1   package cn.itcast.mp;
2
3   import cn.itcast.mp.mapper.UserMapper;
4   import cn.itcast.mp.pojo.User;
5   import org.junit.Test;
6   import org.junit.runner.RunWith;
7   import org.springframework.beans.factory.annotation.Autowired;
8   import org.springframework.boot.test.context.SpringBootTest;
9   import org.springframework.test.context.junit4.SpringRunner;
10
11  @RunWith(SpringRunner.class)
12  @SpringBootTest
13  public class UserMapperTest {
14
15      @Autowired
16      private UserMapper userMapper;
17
18      @Test
19      public void testSelectById() {
20          //根据id查询数据
21          User user = this.userMapper.selectById(2L);
22          System.out.println("result = " + user);
23      }
24
25  }
```

结果：

```
1  [main] [cn.itcast.mp.mapper.UserMapper.selectById]-[DEBUG] ==>  Preparing: SELECT
   id,user_name,password,name,age,email FROM tb_user WHERE id=?
2  [main] [cn.itcast.mp.mapper.UserMapper.selectById]-[DEBUG] ==> Parameters: 2(Long)
3  [main] [cn.itcast.mp.mapper.UserMapper.selectById]-[DEBUG] <==      Total: 1
4
5  result = User(id=2, userName=lisi, password=123456, name=李四, age=20,
   email=test2@itcast.cn, address=null)
```

3.4.2、selectBatchIds

方法定义：

```
1  /**
2   * 查询（根据ID 批量查询）
3   *
4   * @param idList 主键ID列表(不能为 null 以及 empty)
5   */
6  List<T> selectBatchIds(@Param(Constants.COLLECTION) Collection<? extends Serializable>
   idList);
```

测试用例：

```
1   package cn.itcast.mp;
2
3   import cn.itcast.mp.mapper.UserMapper;
4   import cn.itcast.mp.pojo.User;
5   import org.junit.Test;
6   import org.junit.runner.RunWith;
7   import org.springframework.beans.factory.annotation.Autowired;
8   import org.springframework.boot.test.context.SpringBootTest;
9   import org.springframework.test.context.junit4.SpringRunner;
10
11  import java.util.Arrays;
12  import java.util.List;
13
14  @RunWith(SpringRunner.class)
15  @SpringBootTest
16  public class UserMapperTest {
17
18      @Autowired
19      private UserMapper userMapper;
20
21      @Test
22      public void testSelectBatchIds() {
23          //根据id集合批量查询
24          List<User> users = this.userMapper.selectBatchIds(Arrays.asList(2L, 3L, 10L));
25          for (User user : users) {
26              System.out.println(user);
27          }
28      }
29
30  }
```

结果：

```
1  [main] [cn.itcast.mp.mapper.UserMapper.selectBatchIds]-[DEBUG] ==>  Preparing: SELECT
   id,user_name,password,name,age,email FROM tb_user WHERE id IN ( ? , ? , ? )
2  [main] [cn.itcast.mp.mapper.UserMapper.selectBatchIds]-[DEBUG] ==> Parameters: 2(Long),
   3(Long), 10(Long)
3  [main] [cn.itcast.mp.mapper.UserMapper.selectBatchIds]-[DEBUG] <==      Total: 2
4
5  User(id=2, userName=lisi, password=123456, name=李四, age=20, email=test2@itcast.cn,
   address=null)
6  User(id=3, userName=wangwu, password=123456, name=王五, age=28, email=test3@itcast.cn,
   address=null)
```

3.4.3、selectOne

方法定义：

```
1  /**
2   * 根据 entity 条件，查询一条记录
3   *
4   * @param queryWrapper 实体对象封装操作类（可以为 null）
5   */
6  T selectOne(@Param(Constants.WRAPPER) Wrapper<T> queryWrapper);
```

测试用例：

```
1  package cn.itcast.mp;
2
3  import cn.itcast.mp.mapper.UserMapper;
4  import cn.itcast.mp.pojo.User;
5  import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
6  import org.junit.Test;
7  import org.junit.runner.RunWith;
8  import org.springframework.beans.factory.annotation.Autowired;
9  import org.springframework.boot.test.context.SpringBootTest;
10 import org.springframework.test.context.junit4.SpringRunner;
11
12 @RunWith(SpringRunner.class)
13 @SpringBootTest
14 public class UserMapperTest {
15
16     @Autowired
17     private UserMapper userMapper;
18
19     @Test
20     public void testSelectOne() {
21         QueryWrapper<User> wrapper = new QueryWrapper<User>();
22         wrapper.eq("name", "李四");
23
24         //根据条件查询一条数据，如果结果超过一条会报错
25         User user = this.userMapper.selectOne(wrapper);
```

```
26          System.out.println(user);
27      }
28
29  }
```

结果：

```
1  [main] [cn.itcast.mp.mapper.UserMapper.selectOne]-[DEBUG] ==>  Preparing: SELECT
   id,user_name,password,name,age,email FROM tb_user WHERE name = ?
2  [main] [cn.itcast.mp.mapper.UserMapper.selectOne]-[DEBUG] ==> Parameters: 李四(String)
3  [main] [cn.itcast.mp.mapper.UserMapper.selectOne]-[DEBUG] <==      Total: 1
4
5  User(id=2, userName=lisi, password=123456, name=李四, age=20, email=test2@itcast.cn,
   address=null)
```

3.4.4、selectCount

方法定义：

```
1  /**
2   * 根据 Wrapper 条件，查询总记录数
3   *
4   * @param queryWrapper 实体对象封装操作类（可以为 null）
5   */
6  Integer selectCount(@Param(Constants.WRAPPER) Wrapper<T> queryWrapper);
```

测试用例：

```
1  package cn.itcast.mp;
2
3  import cn.itcast.mp.mapper.UserMapper;
4  import cn.itcast.mp.pojo.User;
5  import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
6  import org.junit.Test;
7  import org.junit.runner.RunWith;
8  import org.springframework.beans.factory.annotation.Autowired;
9  import org.springframework.boot.test.context.SpringBootTest;
10 import org.springframework.test.context.junit4.SpringRunner;
11
12 @RunWith(SpringRunner.class)
13 @SpringBootTest
14 public class UserMapperTest {
15
16     @Autowired
17     private UserMapper userMapper;
18
19     @Test
20     public void testSelectCount() {
21         QueryWrapper<User> wrapper = new QueryWrapper<User>();
22         wrapper.gt("age", 23); //年龄大于23岁
23
24         //根据条件查询数据条数
```

```
25          Integer count = this.userMapper.selectCount(wrapper);
26          System.out.println("count = " + count);
27      }
28
29 }
```

结果：

```
1  [main] [cn.itcast.mp.mapper.UserMapper.selectCount]-[DEBUG] ==>  Preparing: SELECT
   COUNT( 1 ) FROM tb_user WHERE age > ?
2  [main] [cn.itcast.mp.mapper.UserMapper.selectCount]-[DEBUG] ==> Parameters: 23(Integer)
3  [main] [cn.itcast.mp.mapper.UserMapper.selectCount]-[DEBUG] <==      Total: 1
4
5  count = 2
```

3.4.5、selectList

方法定义：

```
1  /**
2   * 根据 entity 条件，查询全部记录
3   *
4   * @param queryWrapper 实体对象封装操作类（可以为 null）
5   */
6  List<T> selectList(@Param(Constants.WRAPPER) Wrapper<T> queryWrapper);
```

测试用例：

```
1  package cn.itcast.mp;
2
3  import cn.itcast.mp.mapper.UserMapper;
4  import cn.itcast.mp.pojo.User;
5  import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
6  import org.junit.Test;
7  import org.junit.runner.RunWith;
8  import org.springframework.beans.factory.annotation.Autowired;
9  import org.springframework.boot.test.context.SpringBootTest;
10 import org.springframework.test.context.junit4.SpringRunner;
11
12 import java.util.List;
13
14 @RunWith(SpringRunner.class)
15 @SpringBootTest
16 public class UserMapperTest {
17
18     @Autowired
19     private UserMapper userMapper;
20
21     @Test
22     public void testSelectList() {
23         QueryWrapper<User> wrapper = new QueryWrapper<User>();
24         wrapper.gt("age", 23); //年龄大于23岁
```

```
25
26              //根据条件查询数据
27              List<User> users = this.userMapper.selectList(wrapper);
28              for (User user : users) {
29                  System.out.println("user = " + user);
30              }
31          }
32
33      }
```

结果：

```
1   [main] [cn.itcast.mp.mapper.UserMapper.selectList]-[DEBUG] ==>  Preparing: SELECT
    id,user_name,password,name,age,email FROM tb_user WHERE age > ?
2   [main] [cn.itcast.mp.mapper.UserMapper.selectList]-[DEBUG] ==> Parameters: 23(Integer)
3   [main] [cn.itcast.mp.mapper.UserMapper.selectList]-[DEBUG] <==      Total: 2
4
5   user = User(id=3, userName=wangwu, password=123456, name=王五, age=28,
    email=test3@itcast.cn, address=null)
6   user = User(id=5, userName=sunqi, password=123456, name=孙七, age=24,
    email=test5@itcast.cn, address=null)
```

3.4.6、selectPage

方法定义：

```
1   /**
2    * 根据 entity 条件，查询全部记录（并翻页）
3    *
4    * @param page           分页查询条件（可以为 RowBounds.DEFAULT）
5    * @param queryWrapper 实体对象封装操作类（可以为 null）
6    */
7   IPage<T> selectPage(IPage<T> page, @Param(Constants.WRAPPER) Wrapper<T> queryWrapper);
```

配置分页插件：

```
1   package cn.itcast.mp;
2
3   import com.baomidou.mybatisplus.extension.plugins.PaginationInterceptor;
4   import org.mybatis.spring.annotation.MapperScan;
5   import org.springframework.context.annotation.Bean;
6   import org.springframework.context.annotation.Configuration;
7
8   @Configuration
9   @MapperScan("cn.itcast.mp.mapper") //设置mapper接口的扫描包
10  public class MybatisPlusConfig {
11
12      /**
13       * 分页插件
14       */
15      @Bean
16      public PaginationInterceptor paginationInterceptor() {
```

```
17          return new PaginationInterceptor();
18      }
19  }
```

测试用例：

```java
1  package cn.itcast.mp;
2
3  import cn.itcast.mp.mapper.UserMapper;
4  import cn.itcast.mp.pojo.User;
5  import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
6  import com.baomidou.mybatisplus.core.metadata.IPage;
7  import com.baomidou.mybatisplus.extension.plugins.pagination.Page;
8  import org.junit.Test;
9  import org.junit.runner.RunWith;
10 import org.springframework.beans.factory.annotation.Autowired;
11 import org.springframework.boot.test.context.SpringBootTest;
12 import org.springframework.test.context.junit4.SpringRunner;
13
14 import java.util.List;
15
16 @RunWith(SpringRunner.class)
17 @SpringBootTest
18 public class UserMapperTest {
19
20     @Autowired
21     private UserMapper userMapper;
22
23     @Test
24     public void testSelectPage() {
25         QueryWrapper<User> wrapper = new QueryWrapper<User>();
26         wrapper.gt("age", 20); //年龄大于20岁
27
28         Page<User> page = new Page<>(1,1);
29
30         //根据条件查询数据
31         IPage<User> iPage = this.userMapper.selectPage(page, wrapper);
32         System.out.println("数据总条数:" + iPage.getTotal());
33         System.out.println("总页数:" + iPage.getPages());
34
35
36         List<User> users = iPage.getRecords();
37         for (User user : users) {
38             System.out.println("user = " + user);
39         }
40     }
41
42 }
```

结果：

```
1  [main] [cn.itcast.mp.mapper.UserMapper.selectPage]-[DEBUG] ==>  Preparing: SELECT
   COUNT(1) FROM tb_user WHERE age > ?
2  [main] [cn.itcast.mp.mapper.UserMapper.selectPage]-[DEBUG] ==> Parameters: 20(Integer)
3  [main] [cn.itcast.mp.mapper.UserMapper.selectPage]-[DEBUG] ==>  Preparing: SELECT
   id,user_name,password,name,age,email FROM tb_user WHERE age > ? LIMIT ?,?
4  [main] [cn.itcast.mp.mapper.UserMapper.selectPage]-[DEBUG] ==> Parameters: 20(Integer),
   0(Long), 1(Long)
5  [main] [cn.itcast.mp.mapper.UserMapper.selectPage]-[DEBUG] <==       Total: 1
6  [main] [org.mybatis.spring.SqlSessionUtils]-[DEBUG] Closing non transactional
   SqlSession [org.apache.ibatis.session.defaults.DefaultSqlSession@6ecd665]
7  数据总条数：3
8  总页数：3
9  user = User(id=3, userName=wangwu, password=123456, name=王五，age=28,
   email=test3@itcast.cn, address=null)
```

3.5、SQL注入的原理

前面我们已经知道，MP在启动后会将BaseMapper中的一系列的方法注册到meppedStatements中，那么究竟是如何注入的呢？流程又是怎么样的？下面我们将一起来分析下。

在MP中，ISqlInjector负责SQL的注入工作，它是一个接口，AbstractSqlInjector是它的实现类，实现关系如下：
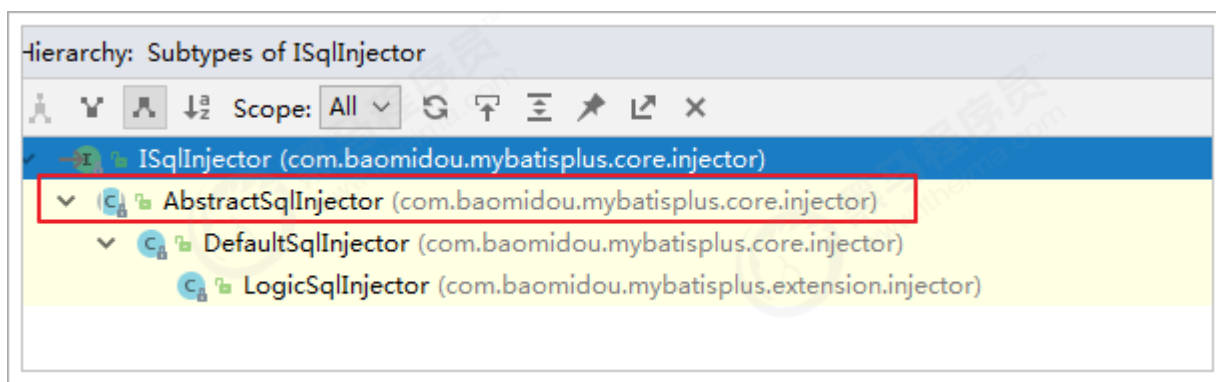

在AbstractSqlInjector中，主要是由inspectInject()方法进行注入的，如下：

```
1   @Override
2   public void inspectInject(MapperBuilderAssistant builderAssistant, Class<?>
    mapperClass) {
3       Class<?> modelClass = extractModelClass(mapperClass);
4       if (modelClass != null) {
5           String className = mapperClass.toString();
6           Set<String> mapperRegistryCache =
    GlobalConfigUtils.getMapperRegistryCache(builderAssistant.getConfiguration());
7           if (!mapperRegistryCache.contains(className)) {
8               List<AbstractMethod> methodList = this.getMethodList();
9               if (CollectionUtils.isNotEmpty(methodList)) {
10                  TableInfo tableInfo = TableInfoHelper.initTableInfo(builderAssistant,
    modelClass);
11                  // 循环注入自定义方法
12                  methodList.forEach(m -> m.inject(builderAssistant, mapperClass,
    modelClass, tableInfo));
13              } else {
```

```
14          logger.debug(mapperClass.toString() + ", No effective injection method
    was found.");
15        }
16        mapperRegistryCache.add(className);
17    }
18  }
19 }
```

在实现方法中，`methodList.forEach(m -> m.inject(builderAssistant, mapperClass, modelClass, tableInfo));`是关键，循环遍历方法，进行注入。

最终调用抽象方法injectMappedStatement进行真正的注入：

```
1    /**
2     * 注入自定义 MappedStatement
3     *
4     * @param mapperClass mapper 接口
5     * @param modelClass  mapper 泛型
6     * @param tableInfo   数据库表反射信息
7     * @return MappedStatement
8     */
9    public abstract MappedStatement injectMappedStatement(Class<?> mapperClass, Class<?
    > modelClass, TableInfo tableInfo);
```

查看该方法的实现：
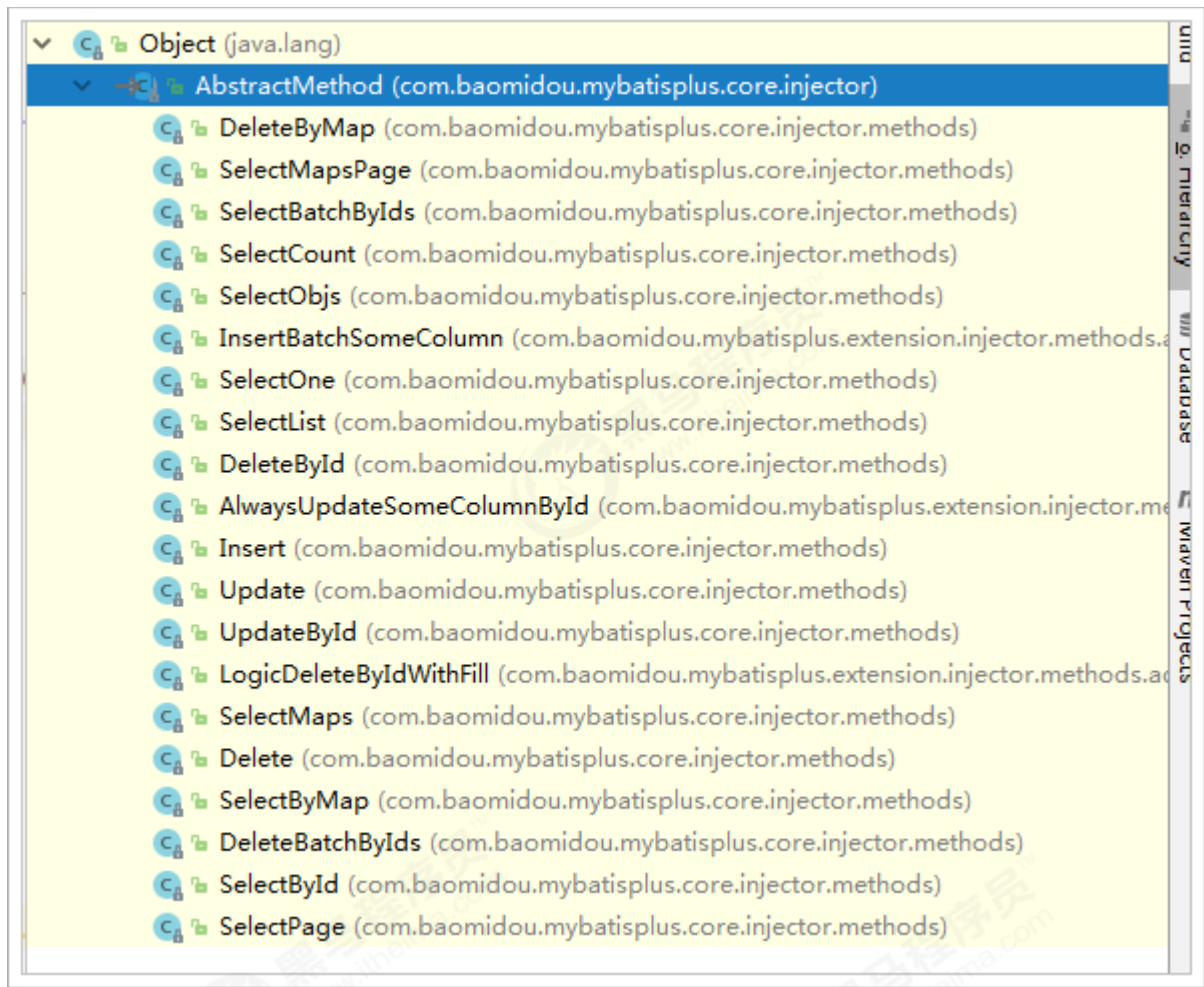

以SelectById为例查看：

```
1   public class SelectById extends AbstractMethod {
2
3       @Override
4       public MappedStatement injectMappedStatement(Class<?> mapperClass, Class<?>
    modelClass, TableInfo tableInfo) {
5           SqlMethod sqlMethod = SqlMethod.LOGIC_SELECT_BY_ID;
6           SqlSource sqlSource = new RawSqlSource(configuration,
    String.format(sqlMethod.getSql(),
7               sqlSelectColumns(tableInfo, false),
8               tableInfo.getTableName(), tableInfo.getKeyColumn(),
    tableInfo.getKeyProperty(),
9               tableInfo.getLogicDeleteSql(true, false)), Object.class);
10          return this.addSelectMappedStatement(mapperClass, sqlMethod.getMethod(),
    sqlSource, modelClass, tableInfo);
11      }
12  }
```

可以看到，生成了SqlSource对象，再将SQL通过addSelectMappedStatement方法添加到meppedStatements中。
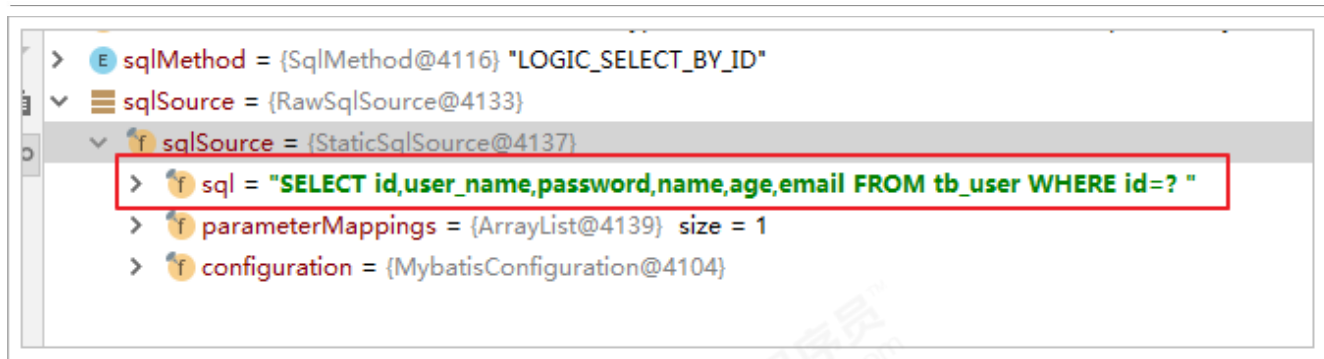

4、配置

在MP中有大量的配置，其中有一部分是Mybatis原生的配置，另一部分是MP的配置，详情：https://mybatis.plus/config/

下面我们对常用的配置做讲解。

4.1、基本配置

4.1.1、configLocation

MyBatis 配置文件位置，如果您有单独的 MyBatis 配置，请将其路径配置到 configLocation 中。 MyBatis Configuration 的具体内容请参考MyBatis 官方文档

Spring Boot：

```
1  mybatis-plus.config-location = classpath:mybatis-config.xml
```

Spring MVC：

```
1  <bean id="sqlSessionFactory"
   class="com.baomidou.mybatisplus.extension.spring.MybatisSqlSessionFactoryBean">
2      <property name="configLocation" value="classpath:mybatis-config.xml"/>
3  </bean>
```

4.1.2、mapperLocations

MyBatis Mapper 所对应的 XML 文件位置，如果您在 Mapper 中有自定义方法（XML 中有自定义实现），需要进行该配置，告诉 Mapper 所对应的 XML 文件位置。

Spring Boot：

```
1  mybatis-plus.mapper-locations = classpath*:mybatis/*.xml
```

Spring MVC：

```
1  <bean id="sqlSessionFactory"
   class="com.baomidou.mybatisplus.extension.spring.MybatisSqlSessionFactoryBean">
2      <property name="mapperLocations" value="classpath*:mybatis/*.xml"/>
3  </bean>
```

Maven 多模块项目的扫描路径需以 `classpath*:` 开头（即加载多个 jar 包下的 XML 文件）

测试：

UserMapper.xml：

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!DOCTYPE mapper
        PUBLIC "-//mybatis.org//DTD Mapper 3.0//EN"
        "http://mybatis.org/dtd/mybatis-3-mapper.dtd">
<mapper namespace="cn.itcast.mp.mapper.UserMapper">

    <select id="findById" resultType="cn.itcast.mp.pojo.User">
      select * from tb_user where id = #{id}
    </select>

</mapper>
```

```java
package cn.itcast.mp.mapper;

import cn.itcast.mp.pojo.User;
import com.baomidou.mybatisplus.core.mapper.BaseMapper;

public interface UserMapper extends BaseMapper<User> {

    User findById(Long id);
}
```

测试用例：

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testSelectPage() {
        User user = this.userMapper.findById(2L);
        System.out.println(user);

```

```
23        }
24
25  }
```

运行结果：

```
ansaction]-[DEBUG] JDBC Connection [HikariProxyConnection@9063
G] ==>  Preparing: select * from tb_user where id = ?
G] ==> Parameters: 2(Long)
G] <==      Total: 1
osing non transactional SqlSession [org.apache.ibatis.session.
qe=20, email=test2@itcast.cn, address=null)
```

4.1.3、typeAliasesPackage

MyBaits 别名包扫描路径，通过该属性可以给包中的类注册别名，注册后在 Mapper 对应的 XML 文件中可以直接使用类名，而不用使用全限定的类名（即 XML 中调用的时候不用包含包名）。

Spring Boot：

```
1  mybatis-plus.type-aliases-package = cn.itcast.mp.pojo
```

Spring MVC：

```
1  <bean id="sqlSessionFactory"
   class="com.baomidou.mybatisplus.extension.spring.MybatisSqlSessionFactoryBean">
2      <property name="typeAliasesPackage"
   value="com.baomidou.mybatisplus.samples.quickstart.entity"/>
3  </bean>
```

4.2、进阶配置

本部分（Configuration）的配置大都为 MyBatis 原生支持的配置，这意味着您可以通过 MyBatis XML 配置文件的形式进行配置。

4.2.1、mapUnderscoreToCamelCase

- 类型：`boolean`
- 默认值：`true`

是否开启自动驼峰命名规则（camel case）映射，即从经典数据库列名 A_COLUMN（下划线命名）到经典 Java 属性名 aColumn（驼峰命名）的类似映射。

> 注意：
>
> 此属性在 MyBatis 中原默认值为 false，在 MyBatis-Plus 中，此属性也将用于生成最终的 SQL 的 select body
>
> 如果您的数据库命名符合规则无需使用 `@TableField` 注解指定数据库字段名

示例（SpringBoot）：

```
1  #关闭自动驼峰映射，该参数不能和mybatis-plus.config-location同时存在
2  mybatis-plus.configuration.map-underscore-to-camel-case=false
```

4.2.2、cacheEnabled

- 类型：`boolean`
- 默认值：`true`

全局地开启或关闭配置文件中的所有映射器已经配置的任何缓存，默认为 true。

示例：

```
1  mybatis-plus.configuration.cache-enabled=false
```

4.3、DB 策略配置

4.3.1、idType

- 类型：`com.baomidou.mybatisplus.annotation.IdType`
- 默认值：`ID_WORKER`

全局默认主键类型，设置后，即可省略实体对象中的@TableId(type = IdType.AUTO)配置。

示例：

SpringBoot：

```
1  mybatis-plus.global-config.db-config.id-type=auto
```

SpringMVC：

```
1   <!--这里使用MP提供的sqlSessionFactory，完成了Spring与MP的整合-->
2       <bean id="sqlSessionFactory"
    class="com.baomidou.mybatisplus.extension.spring.MybatisSqlSessionFactoryBean">
3           <property name="dataSource" ref="dataSource"/>
4           <property name="globalConfig">
5               <bean class="com.baomidou.mybatisplus.core.config.GlobalConfig">
6                   <property name="dbConfig">
7                       <bean
    class="com.baomidou.mybatisplus.core.config.GlobalConfig$DbConfig">
8                           <property name="idType" value="AUTO"/>
9                       </bean>
10                  </property>
11              </bean>
12          </property>
13      </bean>
```

4.3.2、tablePrefix

- 类型：`String`
- 默认值：`null`

表名前缀，全局配置后可省略@TableName()配置。

SpringBoot：
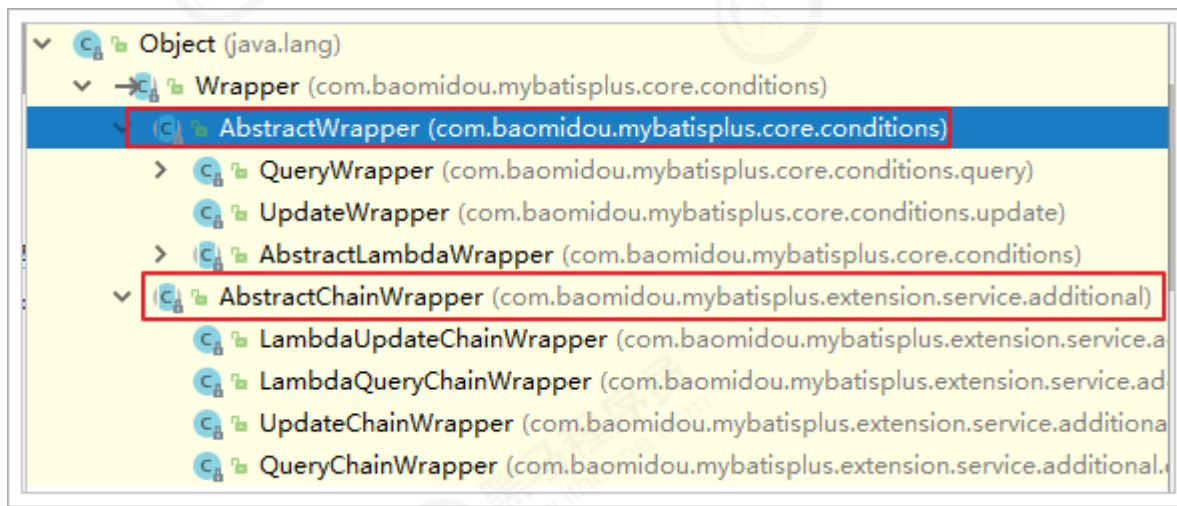

```
1   mybatis-plus.global-config.db-config.table-prefix=tb_
```

SpringMVC：

```
1    <bean id="sqlSessionFactory"
   class="com.baomidou.mybatisplus.extension.spring.MybatisSqlSessionFactoryBean">
2        <property name="dataSource" ref="dataSource"/>
3        <property name="globalConfig">
4            <bean class="com.baomidou.mybatisplus.core.config.GlobalConfig">
5                <property name="dbConfig">
6                    <bean
   class="com.baomidou.mybatisplus.core.config.GlobalConfig$DbConfig">
7                        <property name="idType" value="AUTO"/>
8                        <property name="tablePrefix" value="tb_"/>
9                    </bean>
10               </property>
11           </bean>
12       </property>
13   </bean>
```

5、条件构造器

在MP中，Wrapper接口的实现类关系如下：

可以看到，AbstractWrapper和AbstractChainWrapper是重点实现，接下来我们重点学习AbstractWrapper以及其子类。

> 说明：
>
> QueryWrapper(LambdaQueryWrapper) 和 UpdateWrapper(LambdaUpdateWrapper) 的父类 用于生成 sql 的 where 条件, entity 属性也用于生成 sql 的 where 条件 注意: entity 生成的 where 条件与 使用各个 api 生成的 where 条件**没有任何关联行为**

官网文档地址：https://mybatis.plus/guide/wrapper.html

5.1、allEq

5.1.1、说明

```
1  allEq(Map<R, V> params)
2  allEq(Map<R, V> params, boolean null2IsNull)
3  allEq(boolean condition, Map<R, V> params, boolean null2IsNull)
```

- 全部eq(或个别isNull)

个别参数说明: `params` : `key` 为数据库字段名, `value` 为字段值 `null2IsNull` : 为 `true` 则在 `map` 的 `value` 为 `null` 时调用 `isNull` 方法, 为 `false` 时则忽略 `value` 为 `null` 的

- 例1: `allEq({id:1,name:"老王",age:null})` ---> `id = 1 and name = '老王' and age is null`
- 例2: `allEq({id:1,name:"老王",age:null}, false)` ---> `id = 1 and name = '老王'`

```
1  allEq(BiPredicate<R, V> filter, Map<R, V> params)
2  allEq(BiPredicate<R, V> filter, Map<R, V> params, boolean null2IsNull)
3  allEq(boolean condition, BiPredicate<R, V> filter, Map<R, V> params, boolean
   null2IsNull)
```

个别参数说明: `filter` : 过滤函数, 是否允许字段传入比对条件中 `params` 与 `null2IsNull` : 同上

- 例1: `allEq((k,v) -> k.indexOf("a") > 0, {id:1,name:"老王",age:null})` ---> `name = '老王' and age is null`
- 例2: `allEq((k,v) -> k.indexOf("a") > 0, {id:1,name:"老王",age:null}, false)` ---> `name = '老王'`

5.1.2、测试用例

```java
1  package cn.itcast.mp;
2
3  import cn.itcast.mp.mapper.UserMapper;
4  import cn.itcast.mp.pojo.User;
5  import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
6  import org.junit.Test;
7  import org.junit.runner.RunWith;
8  import org.springframework.beans.factory.annotation.Autowired;
9  import org.springframework.boot.test.context.SpringBootTest;
10 import org.springframework.test.context.junit4.SpringRunner;
11
12 import java.util.HashMap;
13 import java.util.List;
14 import java.util.Map;
15
16 @RunWith(SpringRunner.class)
17 @SpringBootTest
18 public class UserMapperTest {
19
20     @Autowired
21     private UserMapper userMapper;
```

```java
22
23      @Test
24      public void testWrapper() {
25          QueryWrapper<User> wrapper = new QueryWrapper<>();
26
27          //设置条件
28          Map<String,Object> params = new HashMap<>();
29          params.put("name", "曹操");
30          params.put("age", "20");
31          params.put("password", null);
32
33  //       wrapper.allEq(params);//SELECT * FROM tb_user WHERE password IS NULL AND
    name = ? AND age = ?
34  //       wrapper.allEq(params,false); //SELECT * FROM tb_user WHERE name = ? AND age
    = ?
35
36  //       wrapper.allEq((k, v) -> (k.equals("name") || k.equals("age"))
    ,params);//SELECT * FROM tb_user WHERE name = ? AND age = ?
37
38          List<User> users = this.userMapper.selectList(wrapper);
39          for (User user : users) {
40              System.out.println(user);
41          }
42
43      }
44
45  }
```

5.2、基本比较操作

- eq
  - 等于 =
- ne
  - 不等于 <>
- gt
  - 大于 >
- ge
  - 大于等于 >=
- lt
  - 小于 <
- le
  - 小于等于 <=
- between
  - BETWEEN 值1 AND 值2
- notBetween
  - NOT BETWEEN 值1 AND 值2
- in
  - 字段 IN (value.get(0), value.get(1), ...)

- notIn
  - 字段 NOT IN (v0, v1, ...)

测试用例：

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

import java.util.List;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testEq() {
        QueryWrapper<User> wrapper = new QueryWrapper<>();

        //SELECT id,user_name,password,name,age,email FROM tb_user WHERE password = ? AND age >= ? AND name IN (?,?,?)
        wrapper.eq("password", "123456")
                .ge("age", 20)
                .in("name", "李四", "王五", "赵六");

        List<User> users = this.userMapper.selectList(wrapper);
        for (User user : users) {
            System.out.println(user);
        }

    }

}
```

5.3、模糊查询

- like
  - LIKE '%值%'
  - 例：`like("name", "王")` --> `name like '%王%'`
- notLike
  - NOT LIKE '%值%'

- 例: `notLike("name", "王")` ---> `name not like '%王%'`
- likeLeft
  - LIKE '%值'
  - 例: `likeLeft("name", "王")` ---> `name like '%王'`
- likeRight
  - LIKE '值%'
  - 例: `likeRight("name", "王")` ---> `name like '王%'`

测试用例：

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

import java.util.List;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testWrapper() {
        QueryWrapper<User> wrapper = new QueryWrapper<>();

        //SELECT id,user_name,password,name,age,email FROM tb_user WHERE name LIKE ?
        //Parameters: %曹%(String)
        wrapper.like("name", "曹");

        List<User> users = this.userMapper.selectList(wrapper);
        for (User user : users) {
            System.out.println(user);
        }

    }

}
```

5.4、排序

- orderBy
  - 排序：ORDER BY 字段, ...

- 例: `orderBy(true, true, "id", "name")` ---> `order by id ASC,name ASC`
- orderByAsc

  - 排序：ORDER BY 字段, ... ASC
  - 例: `orderByAsc("id", "name")` ---> `order by id ASC,name ASC`
- orderByDesc

  - 排序：ORDER BY 字段, ... DESC
  - 例: `orderByDesc("id", "name")` ---> `order by id DESC,name DESC`

测试用例：

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

import java.util.List;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testWrapper() {
        QueryWrapper<User> wrapper = new QueryWrapper<>();

        //SELECT id,user_name,password,name,age,email FROM tb_user ORDER BY age DESC
        wrapper.orderByDesc("age");

        List<User> users = this.userMapper.selectList(wrapper);
        for (User user : users) {
            System.out.println(user);
        }

    }
}
```

5.5、逻辑查询

- or

  - 拼接 OR
  - 主动调用 or 表示紧接着下一个**方法**不是用 and 连接!(不调用 or 则默认使用 and 连接)

- and
  - AND 嵌套
  - 例: `and(i -> i.eq("name", "李白").ne("status", "活着"))` ---> `and (name = '李白' and status <> '活着')`

测试用例：

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

import java.util.List;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testWrapper() {
        QueryWrapper<User> wrapper = new QueryWrapper<>();

        //SELECT id,user_name,password,name,age,email FROM tb_user WHERE name = ? OR age = ?
        wrapper.eq("name","李四").or().eq("age", 24);

        List<User> users = this.userMapper.selectList(wrapper);
        for (User user : users) {
            System.out.println(user);
        }

    }

}
```

5.6、select

在MP查询中，默认查询所有的字段，如果有需要也可以通过select方法进行指定字段。

```java
package cn.itcast.mp;

import cn.itcast.mp.mapper.UserMapper;
import cn.itcast.mp.pojo.User;
```

```java
import com.baomidou.mybatisplus.core.conditions.query.QueryWrapper;
import org.junit.Test;
import org.junit.runner.RunWith;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.test.context.junit4.SpringRunner;

import java.util.List;

@RunWith(SpringRunner.class)
@SpringBootTest
public class UserMapperTest {

    @Autowired
    private UserMapper userMapper;

    @Test
    public void testWrapper() {
        QueryWrapper<User> wrapper = new QueryWrapper<>();

        //SELECT id,name,age FROM tb_user WHERE name = ? OR age = ?
        wrapper.eq("name", "李四")
                .or()
                .eq("age", 24)
                .select("id", "name", "age");

        List<User> users = this.userMapper.selectList(wrapper);
        for (User user : users) {
            System.out.println(user);
        }

    }

}
```
